

Puppy Foundation Benefits

While most benefits are located with-in the descriptions beneath the different Neurological Enrichments, I can sum this up quickly here. While it seems that there is a lot of early stimulating going on, we keep ours as minimal as possible in order to never over stimulate. It's our goal to produce a happy medium that is just enough to expose them and still reap the best benefits. Our Bio Sensor takes about a minute to do in the morning, from there any other stimulating is used as a game to make it fun for our pups, like chasing the ball around while I run the dishwasher. Most enrichments last anywhere from 5 minutes to 15 minutes, or a dishwasher cycle :) As important as it is to have stimulation it's as important for rest, quiet time, and simple cuddles. Variety is the spice of life and seems to make a very well rounded Labrador that is to fill whatever position you'd like him to.

Well-socialized puppies usually develop into safer, more relaxed and enjoyable pet dogs. This is because they're more comfortable in a wider variety of situations than poorly socialized dogs, so they're less likely to behave fearfully or aggressively when faced with something new. Poorly socialized dogs are much more likely to react with fear or aggression to unfamiliar people, dogs and experiences. Dogs who are relaxed about honking horns, cats, cyclists, veterinary examinations, crowds and long stairwells are easier and safer to live with than dogs who find these situations threatening. Well-socialized dogs also live much more relaxed, peaceful and happy lives than dogs who are constantly stressed out by their environment.
